

# Project Requirements

These are all the requirement we plan on completing for our application. These might change throughout the development process depending on the group's opinion and external feedback.

## Main Requirements

- The user (customers and service providers) should be able to sign up with their name, email and phone number
- Create accounts and make profiles.
- There should be way to verify as a student to use the app
- There should be a homepage with a list of services available.
- There should be an option to change passwords and emails.
- Customers and service providers should be able to update and modify their profiles and the services they provide at any time.
- Users should be able to see and apply for the services
- Service providers should be able to see, approve and deny applications sent by customers
- In addition to the filter option, users should be provided with a search bar to manually search for services
- There should be a filter option to help find specific services based on the distance and service preferences
- There should be an option for customers to contact service providers
- There will be a review section for customers and service providers to view and write reviews
- There should be an option to make payment online or in person after service has been completed
- There should be a history section to see what jobs a user has done recently.

## Other requirements

- The app or website should be user friendly and easy to use.
- The app should be compatible with Android and IOS
- The app needs to be fast, robust, and reliable.
