Project Name: Go local

Names of Students: Alex Smale (ajs215), Lukas Kaas Andersen (lk350), David Addo (da480), Rawan Al Issaei (ra595)

Supervised by: Kemi Ademoye (K.ademoye@kent.ac.uk)

Project description

Go Local is a marketplace that connects customers with local service providers for various needs. It is aimed mainly at students who want to earn some quick cash by offering services like dog walking, lawn mowing, and more. The platform shows available services based on the user's location and features profiles and reviews for both customers and service providers. This helps create a trustworthy and efficient experience for all users. The App is also going to be available for download across Android and IOS platforms.

Results

As things currently stand, the Go Local app is a fully functional marketplace that allows users to create accounts and select their specialties based on the job types they prefer. Go Local is equipped with login authentication that only allows users stored in the database to access the app's privileges. A well-designed and user-friendly home screen welcomes the user and allows for navigation to and from other pages in the app. The home screen also has a search bar that enables users to find specific jobs using keywords based on the search algorithms. On the home screen, there's also a "Recommended For You" section that displays specific jobs based on the user's selected specialties when signing up.

As the Go Local app is a service-based application, users are capable of posting jobs, which appear on the home screen for others to apply for. Users can apply to jobs, and after an application has been made, the job poster can decide to accept or reject applicants based on the price offers they have made for the job. Furthermore, users can view other users' profiles and see the jobs they have posted, and even leave reviews for them. On a user's account, there's also an option to edit their account details, such as email, phone number, and email address. Finally, after a job has been accepted, a chat opens up, enabling users to communicate with each other.

We believe that Go Local, as it is now, is reliable and capable of fulfilling its users' needs.
