Roles and Responsibilities

Roles

All members of the group will have equal responsibility over the project. We feel that we all have equal skills going into this project, and all of us are new to React Native. This means that we will all write code and create the documentation needed.

Responsibilities

- All code must be pushed to the git once a coding session has finished
- Newly implemented features must be manually tested before pushed to the git.
- Code must be legible and well documented.
- All members must attend arranged meetings with/without our supervisor unless a valid reason has been given.
- All members must have done the expected amount of work before each meeting with our supervisor
- Our group will have 1 or 2 meetings a week, depending on if our group feel it's needed.
- A meeting report must be written after every meeting.
